

SHIFT CIPHER WHEEL

Print this sheet twice, once cutting out the entire wheel,

The second print cutting off the larger alphabet circle.

Add your own alphabet, numbers or pictures in the second wheel,

add the smaller wheel to the top of the large using a brad to connect them together. Now you can rotate the small wheel to scramble the cypher and create your code. Ex/ if I added the alphabet and the A on top is aligned with the S, this would be the KEY. and if my code was the word "CAT", the scrambled code would be "KIB"
